PROFESSIONAL SUMMARY

Solutions Engineer with 3+ years spanning the full client lifecycle in enterprise SaaS — from technical discovery, technical demos, and proof-of-concept through solution implementation, deployment, client onboarding, and ongoing delivery and post-sales support across 32 accounts. Maintains a 64% technical win rate across 22 client demos in technical pre-sales, while owning solution delivery and technical account management for those same accounts long-term. Has built and deployed net-new products that opened new market verticals and drove six-figure upsells, backed by hands-on AI and automation engineering (LLM agents, n8n, API integration) and a foundation in data science (Python, SQL, ML).

TECHNICAL SKILLS

Solutions Engineering & Delivery: Technical discovery, requirements gathering, proof-of-concept (POC) development, solution architecture, solution implementation & deployment, configuration, client onboarding, executive & technical demos, post-sales support, technical account management, RFI/RFP response, technical pre-sales, trusted advisor

APIs & Integration: REST APIs, webhooks, API integration, identity-management integration, system-to-system integration

Platforms & Tools: Veoci (expert), Epic EMR, Jira, Confluence, Git, CRM familiarity (Salesforce/HubSpot)

AI & Automation Engineering: LLM agent development, multi-agent orchestration, AI-assisted development tooling, prompt engineering, n8n workflow orchestration (40+ integrations), conditional logic & automated notifications

Languages & Data: Python, SQL (query & diagnostics), Pandas, NumPy, TensorFlow, data visualization, dashboarding, custom reporting

Domain Verticals: Aviation, healthcare, higher education, enterprise, government, utilities

WORK EXPERIENCE

Solutions Engineer

2023 – Present

Veoci Inc.

- Delivered 22 client demos through technical discovery and proof-of-concept engagements; advanced 14 to SOWs or closed deals for a **64% technical win rate**, on deals ranging \$20K–\$100K (new-product and upsell) with expansion potential exceeding \$1M.
- Led onsite technical engagement directly with the head of global security at a Fortune 10 technology company; drove a \$35K upsell and built a custom travel-advisory product search tool that netted an additional \$30K — **\$65K total account expansion**.
- Own 32 client accounts end-to-end across aviation, healthcare, higher education, enterprise, government, and utilities — implemented, deployed, configured, and onboarded each solution, then supported it long-term as the embedded technical account manager and trusted advisor.
- Architected, built, and implemented a net-new Travel Registry product for higher education — taking it from concept through client deployment to open a new revenue stream and vertical for an unmet market need.
- Established the company's footprint in the previously untapped utilities vertical, delivering industry-specific solution architecture that opened a new market segment.
- Designed, built, and deployed 40+ n8n integrations into production for clients — spanning REST APIs, webhooks, and identity-management integration — and engineered AI agents and a custom AI-assisted coding/print-view tooling platform to accelerate solution delivery.
- Built reusable solution templates and demo environments (including a travel-registry demo env) paired with AI-assisted tooling, shortening POC cycles by ~2 weeks and accelerating pipeline progression.
- Partner cross-functionally with Product, Engineering, Sales, and Customer Success — relaying field feedback into the product roadmap.

Office Manager & IT Coordinator

2022 – 2023

Veoci Inc.

- Served as primary IT support resource for a 50+ person organization, resolving hardware/software issues and reducing annual equipment costs by ~20% through laptop refurbishing initiatives.
- Designed and enforced company-wide security protocols including device policies, antivirus deployment, and comprehensive digital/physical backup systems.
- Built custom no-code forms, asset management workflows, and onboarding tools within Veoci, eliminating 3 previously manual processes.
- Managed 10+ vendor relationships, negotiating contracts to ensure cost-efficiency and reliable service delivery.

Test Site Coordinator — Site Lead

2021 – 2023

Yale University

- Operated Epic EMR to generate and manage COVID-19 testing orders for 100+ patients daily, maintaining accuracy and full compliance with institutional protocols.
- Led site staff and daily operations, resolving issues in real time and maintaining high patient throughput and satisfaction.
- Owned inventory and supply-chain coordination; served as primary knowledge resource and trainer for new team members.

Data Science Intern

2021 – 2022

Story Squad

- Improved an image clustering algorithm using Python, TensorFlow, and unsupervised learning techniques to group user-submitted artwork into competitive tiers.
- Trained and deployed a self-hosted neural network for content moderation, preprocessing images to detect and filter profane user submissions.
- Contributed to model evaluation and iteration cycles, improving classification accuracy across successive training runs.

EDUCATION

Data Science Program

2019 – 2020

Lambda School

Coursework: Computer Science, Descriptive & Predictive Statistics, Machine Learning, Data Engineering

Software Engineering — 85 credits toward B.S.

2018

University of Connecticut

Computer Science, Associate's Degree

2017

Gateway Community College

Dean's List (2014–2017) · Phi Theta Kappa Honor Society
